# BabySheepToken

Whitepaper V1 (BaaPaper)

## Introduction

- **BabySheepToken is an experiment in Deflationary Tokenomics, created on the Binance Smart Chain with a simple purpose: to develop a token that has taken steps to promote safety for investors and is deflationary in nature. This is with the intent to help ensure continued liquidity and implement safeguards to help protect against pump and dump schemes, market downtrends and more.**
- **Contract Address:**  
**0x0679174867d74a4fF25BA62F3A73E99f404bA3d6**

Introduction (cont.)

# Values

- **With Decentralized Finance taking the world by storm, the Developers felt that, as of late, DeFi has been in the forefront of the news for (at times) less than honorable reasons. With so many newly minted tokens taking advantage of new investors for their own nefarious gain, they sought out to create a token that is both easy to obtain and will give holders peace-of-mind that their investment will not become a “donation”.**
- **Launched by a team with professionalism and transparency in mind, their aim is to mitigate some of the negatives that have been seen in certain “community” tokens, which have taken the crypto world by storm. There will be no developer social media accounts making cryptic messages that create more FUD (Fear, Unrest, Doubt) than actually help the coin and no administrators or mods that make comments or actions that could negatively reflect on the values of the token, or its developers intent, as a whole.**

Tokenomics

# Protocol

- **With each trade of BabySheepToken (BSHE) a 10% “tax” is taken, with 5% going into Holder Rewards, and 5% going into an Automatic Liquidity Pool. This provides additional liquidity to the Token, as well as gives investors rewards for holding BSHE. This functionality creates peace-of-mind for investors during times of increased selling, such as a market downtrend.**

Tokenomics (cont.)

## 5% Holder Rewards

- **The exact number of tokens is conditional upon the volume of each Buy/Sell, but exactly 5% of each transaction will be distributed evenly in BSHE to all holders. This rewards Investors by giving them an incentive to hold the token long-term, and happens **AUTOMATICALLY!** The higher the trading volume, the more rewards holders see in their wallet.**

Tokenomics (cont.)

## 5% Automatic Liquidity Pool Function

- **This function of the Token automatically adds 5% of all Buys/Sells to the existing Liquidity Pool. This is achieved by creating a Liquidity Pair that consists of 2.5% BSHE and 2.5% WBNB, creating a more stable price floor for investors.**
- **This is more efficient than an integrated Burn Functionality, as simply reducing small amounts of the total supply is only a short-term benefit.**

## Current Distribution

Founders    Development/Expense/Burn    Supply/Float/Dex's

### Initial Wallet Distribution (Launch)

30% - Split between founders wallets

30% - For Development, Expenses, and Burns (will decrease with time)

40% - For deployment to Decentralized Exchanges

Initial Wallet Distribution (cont.)

## The Development/ Expense/Burn Wallet

- **This wallet is secured by a multi-key, ensuring that no one person holds a substantial portion of the liquidity. Decisions made by the Development Team must be executed democratically together, ensuring a system of checks and balances on where that money will go and for what purpose. This wallet will be used for Development of future BSHE utilities, Marketing, Expenses for keeping the website, etc. up and running, for planned Burns at different milestones and as a “Price Stability Mechanism” during times of a downward market trend. Ultimately, the percentage of this wallet will decrease over time, as expenses arise.**

Attention:

# Legal Disclaimer

- Baby Sheep, including but not limited to the overall project, token, website, smart contracts and any media (“BABY SHEEP”) as presented in this conceptual paper is not a licensed, unlicensed or exempted financial or payment service of any kind and in any jurisdiction. Any terminology used in this Whitepaper, on the Website or within Official Social Media is intended only as a basic reference, without any effective or legal meaning of the same terms in a regulated and/or financial environment. BABY SHEEP is decentralized and community driven project and does not have owners, shareholders, promoters, marketers, managers, directors or other figures or entities exerting any form of governance. The BABY SHEEP smart contracts are open-source, security audited, permanent and non-modifiable in any way. The BABY SHEEP token is strictly a utility token in all jurisdictions and is not and cannot be considered to be a “security” or otherwise regulated token of any kind. BABY SHEEP is not in any way e-money and/or fiat money, or an asset backed stable-coin, whether global or limited in scope.
